DETAILED ACTION

Allowable Subject Matter

Claims 1-43 are allowed.

The following is an examiner's statement of reasons for allowance:

Independent claims 1, 16, 25 and 35 recite the limitations of establishing a model of formation stresses in which stresses of a loaded state are represented by the sum of an omni directional hydrostatically loaded mean reference stress, a vertical stress perturbation, and maximum and minimum horizontal stress perturbations, establishing an inversion model that includes inputs from fast and slow flexural velocity dispersions and also includes unknown horizontal perturbations of the model of formation stresses, deriving, from the inversion model, estimates of the maximum and minimum horizontal stress perturbations and determining estimates of the maximum and minimum horizontal stresses of the formation. The closest prior art included steps of modeling stresses and estimating the maximum and minimum horizontal stresses of a formation. The closest prior art did not disclose that stresses of a loaded state are represented by the sum of an omni directional hydrostatically loaded mean reference stress, a vertical stress perturbation, and maximum and minimum horizontal stress perturbations. The closest prior art also did not teach establishing an inversion model that includes inputs from fast and slow flexural velocity dispersions and also includes unknown horizontal perturbations of the model of formation stresses.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The cited prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
